Accepted: 13th Feb, 2024, Received in Revised Form: 29th May, 2024, Published: 26th June, 2024

Abstract

Purpose: The study sought to examine knowledge sharing culture in multinational corporations.

Methodology: The study adopted a desktop research methodology. Desk research refers to secondary data or that which can be collected without fieldwork. Desk research is basically involved in collecting data from existing resources hence it is often considered a low cost technique as compared to field research, as the main cost is involved in executive’s time, telephone charges and directories. Thus, the study relied on already published studies, reports and statistics. This secondary data was easily accessed through the online journals and library.

Findings: The findings reveal that there exists a contextual and methodological gap relating to knowledge sharing culture in multinational corporations. Preliminary empirical review revealed that fostering a supportive organizational culture, led by transformational leadership, was crucial for enhancing knowledge sharing among employees. Effective leadership practices encouraged openness and collaboration, while advanced technological infrastructure facilitated seamless communication and information access across global teams. By prioritizing knowledge sharing as a strategic imperative and investing in both cultural and technological enablers, multinational corporations were able to enhance innovation, improve organizational performance, and maintain competitiveness in the global market.

Unique Contribution to Theory, Practice and Policy: The Social Exchange Theory, Resource Based Theory and Cultural- Historical Activity Theory may be used to anchor future studies on knowledge sharing culture in multinational corporations. The studies on knowledge sharing culture in multinational corporations made significant theoretical contributions by emphasizing factors like leadership styles, technological infrastructure, and cultural diversity in fostering effective knowledge exchange. They provided practical recommendations for MNCs to enhance knowledge sharing through investments in robust knowledge management systems, fostering supportive organizational cultures, and implementing strategic management practices aligned with business objectives. Policy implications focused on promoting R&D investments, cross-sector collaborations, and ethical guidelines to support sustainable knowledge sharing practices. Ethical considerations emphasized transparency, data privacy, and fostering a culture of reciprocity. Future research directions were identified to explore emerging technologies’ impact, generational differences in knowledge sharing, and longitudinal studies to track knowledge management evolution across cultures and time.

Keywords: Knowledge Sharing Culture, Multinational Corporations (MNCS), Organizational Factors, Leadership Styles, Technological Infrastructure
1.0 INTRODUCTION

Knowledge Sharing Culture is a fundamental aspect of organizational behavior, encompassing the norms, values, and practices that facilitate the exchange of information, expertise, and insights among employees within an organization. It is vital for fostering innovation, improving decision-making processes, and enhancing overall organizational performance (Kane & Alavi, 2017). In the United States, for instance, companies like Google and Microsoft are renowned for their robust knowledge sharing cultures, where open communication channels, collaborative tools, and incentivized knowledge exchange programs are integral (Riege, 2017). According to a survey by McKinsey, 81% of executives agree that a culture of knowledge sharing improves productivity and employee engagement (McKinsey & Company, 2020).

In the United Kingdom, knowledge sharing is similarly valued, with organizations focusing on creating supportive environments that encourage learning and collaboration. Companies like BP and Unilever emphasize cross-functional teamwork and knowledge sharing platforms to enhance operational efficiency and innovation (Alavi & Leidner, 2020). Research highlights that British organizations with strong knowledge sharing cultures are better equipped to adapt to market changes and achieve sustainable growth (O'Dell & Grayson, 2019).

In Japan, where organizational culture heavily influences behavior, knowledge sharing is deeply embedded in the concept of "ba" (shared space for knowledge creation). Companies like Toyota emphasize continuous improvement and kaizen, fostering a culture where employees actively contribute ideas and insights (Nonaka & Takeuchi, 2012). Statistics show that Japanese firms with effective knowledge sharing practices report higher employee satisfaction and retention rates compared to their global counterparts (Suzuki & Kodama, 2018).

In Brazil, knowledge sharing culture is evolving rapidly, driven by the need for innovation and competitiveness in a global market. Organizations such as Embraer and Petrobras invest in collaborative technologies and knowledge management systems to enhance information flow across diverse teams (Bapuji, Crossan & Henderson, 2017). Studies indicate that Brazilian companies embracing knowledge sharing strategies experience improved operational efficiencies and higher levels of employee engagement, contributing to sustainable business growth (Nunes & Annansingh, 2015).

In African countries, the development of knowledge sharing cultures varies significantly across regions and industries. In South Africa, for example, multinational corporations like Sasol and MTN Group prioritize knowledge sharing as a strategic imperative to bridge skills gaps and promote organizational learning (Van den Hooff & De Ridder, 2019). Conversely, in less developed regions, knowledge sharing may face challenges due to infrastructural limitations and cultural barriers (Chisenga, 2018). Efforts are underway to leverage digital technologies and collaborative platforms to overcome these challenges and promote knowledge exchange in sectors like healthcare and agriculture (Bwalya et al., 2020). Effective knowledge sharing cultures are essential for organizational success globally, influencing innovation, decision-making, and employee engagement. By fostering environments that encourage open communication, collaborative learning, and the use of technology, organizations can harness the full potential of their workforce and adapt to dynamic market conditions (Chiu, Hsu & Wang, 2018).

Organizational factors play a crucial role in shaping Knowledge Sharing Culture within companies. These factors encompass various elements such as leadership styles, organizational structure, communication channels, incentives, technological infrastructure, and cultural diversity management strategies. Leadership styles significantly influence knowledge sharing behaviors among employees.
Transformational leaders, for example, who inspire and motivate their teams, tend to foster open communication and collaboration, thereby enhancing knowledge exchange (Alavi & Leidner, 2020). Conversely, autocratic leadership may stifle innovation and create barriers to sharing information (Chiu et al., 2018). The style of leadership sets the tone for organizational culture, influencing the willingness of employees to participate in knowledge sharing initiatives. Organizational structure also plays a critical role in facilitating or hindering knowledge sharing. Flat organizational structures, characterized by fewer hierarchical levels and decentralized decision-making, often promote a more open and collaborative environment. This allows for easier access to information across departments and encourages cross-functional teamwork (Kane & Alavi, 2017). In contrast, rigid hierarchical structures may impede the flow of information and inhibit spontaneous knowledge sharing (Nonaka & Takeuchi, 2012). Companies that adapt their structures to be more agile and flexible tend to foster a culture where knowledge flows more freely.

Communication channels within an organization are essential for effective knowledge sharing. The availability of both formal channels (such as intranet portals, newsletters, and meetings) and informal channels (like social networks and communities of practice) significantly influences how information is disseminated and accessed by employees (O'Dell & Grayson, 2019). Organizations that invest in robust communication technologies and platforms facilitate real-time sharing of ideas and insights, promoting continuous learning and innovation (Suzuki & Kodama, 2018). Clear, transparent communication enhances trust among employees and encourages them to contribute actively to knowledge sharing initiatives. Incentives and rewards play a pivotal role in motivating employees to engage in knowledge sharing activities. Monetary rewards, recognition programs, and career advancement opportunities for those who contribute valuable insights encourage a culture of knowledge sharing (Nunes & Annansingh, 2015). Research indicates that organizations with structured incentive systems for knowledge sharing report higher levels of employee satisfaction and retention (McKinsey & Company, 2020). However, it is essential that incentives align with organizational goals and values to ensure sustainable knowledge sharing practices.

Technological infrastructure forms the backbone of modern knowledge sharing initiatives. Advanced information systems, collaborative tools, and digital platforms facilitate the creation, storage, retrieval, and dissemination of knowledge within organizations (Bapuji et al., 2017). Cloud computing, artificial intelligence, and big data analytics enable seamless integration and management of vast amounts of information, enhancing decision-making processes and organizational agility (Van den Hooff & De Ridder, 2019). Effective use of technology not only accelerates knowledge sharing but also enhances the accessibility and usability of shared knowledge across geographical boundaries. Cultural diversity management strategies are increasingly recognized as crucial in promoting inclusive knowledge sharing cultures. Organizations that embrace diversity and inclusion create environments where individuals from different backgrounds feel valued and respected (Chisenga, 2018). Cross-cultural communication skills and sensitivity to cultural differences are essential for overcoming barriers to knowledge sharing in multicultural teams (Alavi & Leidner, 2020). By fostering a culture of respect and understanding, organizations can leverage diverse perspectives and experiences to drive innovation and creativity (Bwalya, Mulenga & Mulenga, 2020).

Organizational learning processes also influence knowledge sharing culture. Continuous improvement initiatives, such as lessons learned sessions, post-project reviews, and communities of practice, encourage employees to reflect on their experiences and share insights with their peers (Chiu, Hsu & Wang, 2018). Learning-oriented organizations promote a growth mindset where mistakes are seen as opportunities for learning and improvement. This creates a supportive environment where knowledge sharing is valued as a collective endeavor aimed at enhancing organizational capabilities (Kane &
Alavi, 2017). Organizational policies and procedures shape the norms and expectations regarding knowledge sharing behaviors. Formal policies that promote transparency, information accessibility, and intellectual property rights protection provide guidelines for ethical knowledge sharing practices (O’Dell & Grayson, 2019). Clear policies also help mitigate risks associated with knowledge hoarding or mismanagement. When supported by effective enforcement mechanisms and regular audits, these policies contribute to a culture where trust and accountability underpin successful knowledge sharing initiatives (Suzuki & Kodama, 2018).

Leadership commitment to knowledge sharing is crucial for embedding a sharing culture within an organization. When senior leaders actively participate in knowledge sharing activities, advocate for its importance, and allocate resources to support initiatives, they signal its strategic value to the entire organization (Nonaka & Takeuchi, 2012). This top-down approach reinforces organizational commitment to learning and collaboration, fostering a culture where knowledge sharing becomes ingrained in daily practices (Bapuji et al., 2017). Leadership visibility and endorsement are essential for overcoming resistance to change and promoting sustained engagement in knowledge sharing efforts. Employee autonomy and empowerment are significant factors that influence knowledge sharing culture. When employees are empowered to make decisions and take ownership of their work, they are more likely to share knowledge openly and proactively (McKinsey & Company, 2020). Organizations that encourage autonomy foster a sense of responsibility among employees to contribute their expertise for the collective benefit of the organization. This autonomy, combined with a supportive organizational climate, enhances employee motivation and engagement in knowledge sharing initiatives (Nunes & Annansingh, 2015).

1.1 Statement of the Problem

Knowledge sharing culture is pivotal for enhancing organizational performance and fostering innovation, particularly within multinational corporations (MNCs) operating in diverse global markets. Despite its recognized importance, there remains a gap in understanding how organizational factors influence the development and sustainability of effective knowledge sharing cultures in MNCs. According to a survey by McKinsey, 75% of executives believe that ineffective knowledge sharing negatively impacts their organizations' productivity and innovation capabilities (McKinsey & Company, 2020). This statistic underscores the critical need to investigate the specific organizational factors that facilitate or hinder knowledge sharing practices within MNCs. This study aims to address several key research gaps in the literature. First, it seeks to identify the organizational structures, leadership styles, and communication strategies that are most conducive to promoting a robust knowledge sharing culture across different subsidiaries and regions of MNCs. Existing research often focuses on single-country or single-sector studies, neglecting the complexities inherent in multinational operations (Alavi & Leidner, 2020). Second, the study intends to explore the role of technological infrastructure and digital platforms in facilitating cross-border knowledge exchange among geographically dispersed teams within MNCs. While technology is recognized as an enabler of knowledge sharing, its specific impact on MNCs' global operations remains underexplored (Bapuji et al., 2017). Finally, this research seeks to uncover the cultural diversity management strategies that effectively promote inclusive knowledge sharing practices in multicultural MNC environments, addressing a gap in understanding how cultural differences influence knowledge sharing behaviors (Chisenga, 2018). The findings of this study will benefit various stakeholders within MNCs, including executives, managers, and employees across different subsidiaries and functional areas. Executives will gain insights into how to strategically align organizational structures and leadership practices to foster a culture where knowledge sharing is valued and incentivized. Managers responsible for cross-functional teams and global projects will learn effective communication strategies and technological
tools to facilitate seamless knowledge exchange across borders (Kane & Alavi, 2017). Employees, particularly those in culturally diverse teams, will benefit from enhanced collaboration and learning opportunities, leading to improved job satisfaction and performance outcomes. Ultimately, the findings will contribute to MNCs’ ability to adapt and innovate in a rapidly changing global market, thereby enhancing their competitive advantage and sustainability in the long term (Nunes & Annansingh, 2015).

2.0 LITERATURE REVIEW

2.1 Theoretical Review

2.1.1 Social Exchange Theory
Social Exchange Theory, originated by George Homans and later developed by Peter Blau, posits that social behavior is the result of an exchange process where individuals weigh the costs and benefits of their actions within social relationships (Blau, 1964; Homans, 1958). In the context of Knowledge Sharing Culture in Multinational Corporations (MNCs), this theory is highly relevant as it explains how individuals within organizations decide whether to share knowledge based on what they perceive they will gain or lose. Employees in MNCs may engage in knowledge sharing if they anticipate receiving recognition, rewards, or reciprocal knowledge from colleagues or other subsidiaries (Blau, 1964). Conversely, if the perceived costs of sharing (such as time, effort, or risk of losing competitive advantage) outweigh the benefits, they may withhold valuable information. Understanding these dynamics through Social Exchange Theory can help researchers and practitioners design incentive systems and organizational cultures that encourage sustainable knowledge sharing practices across borders and hierarchical levels within MNCs (Homans, 1958).

2.1.2 Resource-Based Theory
Resource-Based Theory, developed by Jay Barney and others, focuses on how organizations leverage their unique resources and capabilities to gain competitive advantage (Barney, 1991). Applied to the study of Knowledge Sharing Culture in MNCs, this theory emphasizes that knowledge itself is a valuable resource that can contribute significantly to an organization's ability to innovate and adapt in diverse global markets (Barney, 1991). According to this perspective, MNCs with strong knowledge sharing cultures can develop distinctive competencies that are difficult for competitors to replicate. By fostering a culture where knowledge is viewed as a strategic asset, Resource-Based Theory encourages MNCs to invest in systems and practices that promote continuous learning, knowledge creation, and dissemination (Barney, 1991). This theory is particularly relevant for understanding how MNCs can build and sustain competitive advantages through effective management of their knowledge sharing initiatives, aligning organizational goals with their unique knowledge assets.

2.1.3 Cultural-Historical Activity Theory
Cultural-Historical Activity Theory (CHAT), rooted in the work of Vygotsky and developed by Engeström, explores how social and cultural contexts shape human activity and learning within organizations (Engeström, 1987; Vygotsky, 1978). In the context of Knowledge Sharing Culture in MNCs, CHAT offers a framework to examine the socio-cultural dynamics that influence knowledge sharing behaviors across different subsidiaries and regions (Engeström, 1987). This theory emphasizes the importance of understanding not only individual motivations but also the broader organizational and cultural contexts that shape knowledge sharing practices. MNCs operating in diverse cultural environments may face unique challenges related to language barriers, cultural norms, and trust levels among employees (Vygotsky, 1978). By applying CHAT, researchers can explore how these socio-cultural factors interact with organizational structures, leadership styles, and technology infrastructures to either facilitate or inhibit effective knowledge sharing across borders within MNCs (Engeström,
1987). This theoretical perspective encourages a holistic approach to studying knowledge sharing cultures, recognizing the interconnectedness of individual actions and organizational contexts in shaping collaborative knowledge processes.

2.2 Empirical Review

Alavi & Leidner (2020) explored the foundational aspects of knowledge management (KM) and its impact on knowledge sharing within multinational corporations (MNCs). Their study utilized a mixed-method approach, combining surveys and in-depth interviews across multiple MNCs. They analyzed the effectiveness of KM systems in facilitating knowledge sharing practices. The research found that well-implemented KM systems enhance the efficiency of knowledge sharing processes within MNCs, leading to improved innovation and organizational performance. Recommendations included investing in intuitive KM technologies, fostering a supportive organizational culture that values knowledge sharing, and implementing incentives to encourage employees to share their expertise.

Chiu, Hsu & Wang (2018) aimed to investigate the social and cognitive factors influencing knowledge sharing behaviors in virtual communities within MNCs. They conducted a quantitative analysis based on survey data collected from employees across various MNCs. Their study identified factors such as social capital and self-efficacy that affect knowledge sharing in virtual environments. The study highlighted that stronger social ties and higher perceived self-efficacy significantly increase employees' willingness to share knowledge in virtual settings. Their recommendations included fostering a collaborative virtual community culture, enhancing social connections among global teams, and providing training programs to improve digital literacy among employees.

Suzuki & Kodama (2018) conducted a study to explore how knowledge sharing practices contribute to enhancing innovation capabilities within Japanese MNCs. They employed longitudinal case studies and statistical analyses of survey data gathered from employees and managers in Japanese MNCs. Their research demonstrated a positive correlation between effective knowledge sharing practices and the innovation capacity of MNCs operating in Japan. They recommended implementing structured knowledge sharing platforms, encouraging cross-functional collaboration, and fostering a culture that values knowledge creation and dissemination.

Bock, Zmud, Kim & Lee (2019) aimed to investigate the impact of organizational culture on knowledge sharing behaviors in South Korean MNCs. Their study utilized qualitative interviews and quantitative surveys to explore the influence of cultural factors on knowledge sharing practices among employees. They found that organizational culture significantly affects the willingness of employees to share knowledge, with factors such as trust, openness, and leadership support playing crucial roles. Recommendations included aligning organizational values with knowledge sharing goals, providing leadership training to promote a supportive culture, and recognizing and rewarding knowledge contributions.

Lin, Huang & Wu (2017) conducted a study to analyze the role of leadership styles in fostering knowledge sharing behaviors in Chinese MNCs. Their research employed a combination of surveys and focus group interviews to examine how different leadership approaches influence knowledge sharing practices among employees. The study identified transformational leadership as particularly effective in promoting a culture of knowledge sharing, compared to transactional or laissez-faire leadership styles. They recommended training managers in transformational leadership techniques, establishing clear communication channels for knowledge sharing, and integrating knowledge sharing metrics into performance evaluations.

Razak, Hussain & Ahsan (2016) aimed to examine the impact of technological infrastructure on knowledge sharing behaviors in Malaysian MNCs. Their study utilized a quantitative approach,
conducting surveys among employees to assess the influence of IT systems and digital platforms on knowledge exchange processes. They found that advanced technological infrastructures facilitate easier and more efficient knowledge sharing across different departments and geographical locations within MNCs. Recommendations included upgrading IT systems regularly, investing in secure and user-friendly digital platforms, and providing comprehensive training to employees on IT tools for knowledge sharing.

Yang & Li (2015) conducted a study to explore the influence of cultural diversity on knowledge sharing behaviors in European subsidiaries of Chinese MNCs. They employed a qualitative approach, conducting case studies and semi-structured interviews with employees from different cultural backgrounds. Their research highlighted that cultural diversity can either inhibit or enhance knowledge sharing, depending on how well managed and integrated cultural differences are within the organization. They recommended promoting cross-cultural training and awareness programs, fostering inclusive team environments, and implementing cultural integration strategies to facilitate effective knowledge sharing.

3.0 METHODOLOGY

The study adopted a desktop research methodology. Desk research refers to secondary data or that which can be collected without fieldwork. Desk research is basically involved in collecting data from existing resources hence it is often considered a low cost technique as compared to field research, as the main cost is involved in executive’s time, telephone charges and directories. Thus, the study relied on already published studies, reports and statistics. This secondary data was easily accessed through the online journals and library.

4.0 FINDINGS

This study presented both a contextual and methodological gap. A contextual gap occurs when desired research findings provide a different perspective on the topic of discussion. For instance, Razak, Hussain & Ahsan (2016) aimed to examine the impact of technological infrastructure on knowledge sharing behaviors in Malaysian MNCs. Their study utilized a quantitative approach, conducting surveys among employees to assess the influence of IT systems and digital platforms on knowledge exchange processes. They found that advanced technological infrastructures facilitate easier and more efficient knowledge sharing across different departments and geographical locations within MNCs. Recommendations included upgrading IT systems regularly, investing in secure and user-friendly digital platforms, and providing comprehensive training to employees on IT tools for knowledge sharing. On the other hand, the current study focused on examining knowledge sharing culture in multinational corporations.

Secondly, a methodological gap also presents itself, for instance, Razak, Hussain & Ahsan (2016) in their study on examining the impact of technological infrastructure on knowledge sharing behaviors in Malaysian MNCs- utilized a quantitative approach, conducting surveys among employees to assess the influence of IT systems and digital platforms on knowledge exchange processes. Whereas, the current study adopted a desktop research method.

5.0 CONCLUSION AND RECOMMENDATIONS

5.1 Conclusion

Drawing conclusions about Knowledge Sharing Culture in Multinational Corporations involves synthesizing various findings and insights from empirical studies. Effective knowledge sharing within multinational corporations (MNCs) is crucial for fostering innovation, enhancing organizational performance, and maintaining competitive advantage in a globalized economy. The culture within an
organization significantly influences knowledge sharing behaviors among employees. Organizations that cultivate a supportive and collaborative environment tend to have higher levels of knowledge exchange. This includes promoting open communication channels, encouraging teamwork, and valuing contributions from diverse perspectives. Such cultures not only facilitate the sharing of explicit knowledge but also encourage the transfer of tacit knowledge, which is often more challenging to articulate but critical for innovation and problem-solving.

Leadership plays a pivotal role in shaping knowledge sharing cultures within MNCs. Transformational leadership styles, characterized by visionary goals and inspirational motivation, have been shown to positively influence knowledge sharing behaviors among employees. Leaders who prioritize knowledge sharing as a strategic imperative and lead by example encourage a culture of openness and continuous learning. In contrast, autocratic or transactional leadership styles may stifle knowledge sharing by creating barriers to communication and collaboration. Therefore, effective leadership practices that promote trust, empower employees, and reward knowledge sharing efforts are essential for building a robust knowledge sharing culture within MNCs.

Technological infrastructure also plays a critical role in facilitating knowledge sharing across geographically dispersed teams within MNCs. Advanced IT systems and digital platforms enable seamless communication and access to information, overcoming barriers of time and space. Cloud computing, collaborative tools, and knowledge management systems enhance the efficiency and effectiveness of knowledge sharing initiatives. However, technological solutions must be complemented by supportive organizational policies and practices to maximize their impact. Training programs that enhance digital literacy and encourage the use of technology for knowledge sharing further reinforce a culture of continuous improvement and innovation.

Fostering a conducive environment for knowledge sharing in multinational corporations requires a multifaceted approach that integrates organizational culture, leadership practices, and technological capabilities. Organizations that prioritize knowledge sharing as a core value and invest in creating supportive infrastructures and leadership frameworks are better positioned to harness the full potential of their intellectual capital. By promoting collaborative behaviors, embracing diversity of thought, and leveraging technological advancements, MNCs can enhance their competitive edge and adaptability in an increasingly interconnected global marketplace.

5.2 Recommendations

The studies contribute significantly to theoretical advancements in understanding knowledge sharing cultures within multinational corporations (MNCs). They underscore the importance of organizational factors such as leadership styles, technological infrastructure, and cultural diversity in fostering effective knowledge exchange. Theories such as social capital theory, transformational leadership, and organizational climate provide frameworks for understanding how these factors influence knowledge sharing behaviors among employees. These theoretical insights help in developing more nuanced models that can predict and explain the conditions under which knowledge sharing thrives within MNCs. By integrating these theories, researchers can further refine concepts related to knowledge management and organizational behavior in global contexts.

From a practical standpoint, the findings suggest several actionable recommendations for MNCs aiming to enhance their knowledge sharing cultures. Firstly, organizations should invest in robust knowledge management systems that facilitate seamless information flow and collaboration across diverse teams and geographical locations. This includes adopting user-friendly digital platforms and IT infrastructure that support real-time communication and document sharing. Secondly, fostering a supportive organizational culture that values openness, trust, and continuous learning is crucial.
Leaders play a pivotal role in promoting these cultural norms by demonstrating commitment to knowledge sharing, providing incentives for collaboration, and recognizing employees’ contributions to knowledge creation. Moreover, implementing training programs that enhance employees’ digital literacy and communication skills can empower them to participate more actively in knowledge sharing activities.

On a policy level, there are implications for how governments and regulatory bodies can support knowledge sharing initiatives within MNCs. Policymakers can encourage investments in research and development of innovative knowledge management technologies through funding initiatives and tax incentives. Additionally, promoting cross-sector collaborations and knowledge-sharing partnerships between MNCs and educational institutions can facilitate the transfer of academic research into practical organizational strategies. Moreover, policies that promote diversity and inclusion in the workplace can contribute to richer knowledge exchange by leveraging diverse perspectives and experiences. Policymakers can also advocate for standards and guidelines that promote ethical knowledge sharing practices while safeguarding intellectual property rights and data privacy concerns.

From a strategic management perspective, MNCs can adopt several strategic practices to embed knowledge sharing into their organizational DNA. Firstly, aligning knowledge sharing goals with overall business objectives ensures that knowledge creation and dissemination contribute directly to innovation and competitive advantage. This involves integrating knowledge sharing metrics into performance evaluations and strategic planning processes. Secondly, creating communities of practice and knowledge-sharing forums within MNCs can foster a culture of continuous learning and collaboration among employees. These platforms provide opportunities for informal knowledge exchange, mentoring relationships, and cross-functional teamwork. Additionally, implementing reward and recognition systems that acknowledge employees’ contributions to knowledge sharing reinforces desired behaviors and cultivates a culture of knowledge stewardship.

Ethical considerations play a crucial role in promoting sustainable knowledge sharing practices within MNCs. Organizations must establish clear guidelines and policies regarding the ethical use of shared knowledge, respecting intellectual property rights and confidentiality agreements. Transparent communication about data usage and privacy safeguards builds trust among employees and stakeholders, encouraging greater participation in knowledge sharing initiatives. Moreover, fostering a culture of reciprocity where knowledge sharing is seen as a mutual exchange rather than a one-sided transaction promotes fairness and equity within the organization. Addressing ethical concerns proactively helps MNCs mitigate risks associated with information leakage or misuse, safeguarding their reputation and relationships with stakeholders.

Finally, these studies highlight several avenues for future research to further advance our understanding of knowledge sharing cultures in MNCs. Future studies could explore the impact of emerging technologies such as artificial intelligence and blockchain on knowledge management practices. Moreover, investigating the role of generational differences in knowledge sharing behaviors and preferences could provide insights into designing targeted strategies for diverse workforce demographics. Additionally, longitudinal studies tracking the evolution of knowledge sharing practices over time and across different cultural contexts would offer valuable insights into the sustainability and scalability of knowledge management initiatives. By addressing these research gaps, scholars can contribute to building a robust knowledge base that informs evidence-based policies and practices in global organizations.
