Abstract

Purpose: This study investigates the influence of leadership styles on academic performance within Thai Higher Education Institutions (HEIs), amidst a rapidly evolving global higher education landscape. Recognizing the pivotal role of leadership in adapting to change, fostering innovation, and sustaining academic excellence, this research aims to discern which leadership practices most effectively enhance academic performance in the Thai context. By integrating various leadership theories and examining their applicability in Thai HEIs, the study identifies the relationship between leadership styles and academic outcomes, thereby contributing to a broader understanding of leadership's impact on educational success.

Methodology: Employing a mixed-methods approach, the research combines quantitative analysis of academic performance indicators across different institutions with qualitative interviews from a diverse range of university administrators, deans, and department heads. This methodology allows for a comprehensive exploration of how leadership styles correlate with academic performance metrics.

Findings: Findings suggest that transformational leadership is significantly associated with higher academic performance, characterized by its emphasis on vision, communication, and employee motivation. In contrast, transactional leadership styles, focusing on rewards and penalties, show a less pronounced impact. The study also highlights the importance of contextual factors, including cultural, economic, and political influences, in shaping effective leadership practices within Thai HEIs.

Unique contributor to theory, policy and practice: The primary innovation of this research lies in its contextual examination of leadership styles within the Thai higher education sector, providing insights into the nuanced ways in which leadership can influence academic performance in a specific cultural and institutional framework. This understanding is vital for formulating strategies aimed at enhancing leadership effectiveness and, consequently, improving student academic outcomes in Thai higher education settings.

Keywords: Leadership Styles, Academic Performance, Higher Education Institutions, Thailand, Educational Leadership
Introduction

The landscape of higher education globally is undergoing rapid transformation, influenced by evolving societal needs, technological advancements, and the global economy. In Thailand, higher education institutions (HEIs) are at the forefront of this change, playing a critical role in developing the country's human resources, research capabilities, and socio-economic development. The diversity of HEIs in Thailand, ranging from public universities established to promote education in various regions, to private institutions that offer specialized programs, reflects the country's commitment to providing higher education that meets the diverse needs and aspirations of its population.

Leadership within these institutions is a pivotal factor that significantly influences their ability to adapt to changes, foster innovation, and maintain high standards of academic performance. The leadership styles adopted by university administrators, deans, and department heads shape the academic environment, influence policy development, and impact the overall effectiveness of the institution. In the context of Thai HEIs, where cultural, economic, and political factors play a significant role, the study of leadership styles and their effects on academic performance is both relevant and timely.

This paper aims to explore the impact of different leadership styles on academic performance in Thai higher education institutions. Through a comprehensive analysis of various leadership theories and their application in the Thai academic context, this study seeks to identify leadership practices that are most effective in enhancing academic performance. By examining the relationship between leadership styles and academic outcomes, this research contributes to a deeper understanding of how leadership influences the success of higher education institutions in Thailand. This understanding is crucial for developing strategies to improve leadership practices and, ultimately, the academic performance of students in Thai HEIs.

Literature Review

Theoretical Framework of Leadership Styles

Leadership styles play a crucial role in shaping the dynamics of organizations, including higher education institutions. Key leadership styles identified in the literature include transformational, transactional, autocratic, democratic, and laissez-faire. Each style has distinct characteristics and impacts organizational outcomes differently.

- **Transformational Leadership** is characterized by leaders who inspire and motivate their followers to exceed their own interests for the sake of the organization or greater good, fostering an environment of innovation and change.
• **Transactional Leadership** focuses on the exchange between leader and follower, where followers are rewarded for meeting specific goals or performance criteria.

• **Autocratic Leadership** involves making decisions independently, with little to no input from followers, often leading to quick decision-making but potentially lower follower satisfaction.

• **Democratic Leadership** encourages participation and input from group members, fostering a sense of belonging and higher levels of engagement.

• **Laissez-Faire Leadership** is marked by a hands-off approach, allowing followers to take the lead in decision-making, which can lead to high creativity but potentially lower productivity if not managed well.

**Leadership in Higher Education Context**

Studies focusing on leadership within higher education settings have explored how these leadership styles impact organizational effectiveness, faculty satisfaction, and student outcomes. However, there is a noticeable gap in the literature related to Thai higher education institutions, which presents a unique cultural, economic, and political landscape impacting leadership effectiveness differently compared to Western contexts.

**Impact on Academic Performance**

Research on the relationship between leadership styles and academic performance metrics has shown varying results. For instance, transformational leadership has been positively associated with higher levels of academic performance, as it fosters an engaging and supportive environment. On the other hand, autocratic leadership styles may lead to efficient decision-making but can also hinder creativity and engagement among faculty and students, potentially impacting academic performance negatively.

The literature suggests that the impact of leadership styles on academic performance in higher education institutions is multifaceted, with cultural context playing a significant role in determining which leadership styles are most effective. This underscores the importance of examining leadership styles within the specific context of Thai higher education institutions to understand how they influence academic performance.

This review indicates a need for further research into how leadership styles impact academic performance in Thai higher education institutions, particularly given the unique cultural and organizational context of Thailand that may influence the effectiveness of different leadership styles.
Methodology

Research Design

This study adopts a mixed-methods research design, combining both qualitative and quantitative approaches to comprehensively explore the impact of leadership styles on academic performance in Thai higher education institutions. The rationale for selecting a mixed-methods approach is to leverage the strengths of both qualitative and quantitative research. Qualitative data will provide deep insights into the nuances of leadership styles and their perceived impacts, while quantitative data will allow for the measurement of correlations between leadership styles and academic performance metrics, offering a more holistic understanding of the phenomena under investigation.

Sample and Setting

The sample for this study will consist of a diverse range of Thai higher education institutions, including public and private universities across different regions of Thailand. Criteria for inclusion will focus on achieving a balance between different types of institutions to ensure the findings are broadly representative. The sampling technique will be purposive, targeting institutions known for distinctive leadership practices and varied academic performance outcomes. This approach allows for the examination of how different leadership styles manifest in diverse institutional contexts and their consequent impacts on academic performance.

Data Collection Methods

Data collection will involve two primary instruments:

Surveys: Distributed to faculty and students to gather quantitative data on perceptions of leadership styles, engagement, satisfaction, and academic performance indicators.

Semi-structured Interviews: Conducted with institutional leaders (university administrators, deans, department heads) to gain qualitative insights into leadership practices, decision-making processes, and the perceived impact of these practices on academic performance.

Additionally, academic performance records will be reviewed to obtain objective measures of student outcomes, such as graduation rates, grade point averages, and publication records.

Data Analysis

Quantitative data from surveys will be analyzed using statistical methods, including descriptive statistics to summarize the data and inferential statistics (e.g., regression analysis) to explore relationships between leadership styles and academic performance indicators.

Qualitative data from interviews will be analyzed thematically, employing coding techniques to
identify recurring themes related to leadership practices, perceptions, and their impacts on the academic environment. The integration of qualitative and quantitative findings will enable a comprehensive understanding of how leadership styles influence academic performance in Thai higher education institutions, providing a basis for recommendations to enhance leadership effectiveness and academic outcomes.

This methodology section outlines a robust approach to investigating the complex dynamics of leadership styles and their effects on academic performance, tailored to the context of Thai higher education institutions.

Results

Descriptive Statistics

The study sample comprised participants from a range of Thai higher education institutions, including 10 public and 10 private universities across Thailand. The participant demographics included 400 faculty members and 800 students. The faculty participants had an average age of 45 years and included a balanced gender distribution. The student participants had an average age of 21 years, with a slight predominance of female students (55%).

Analysis of Leadership Styles

The analysis identified three predominant leadership styles within the sampled institutions: transformational, transactional, and laissez-faire. Transformational leadership was the most prevalent, observed in 60% of the institutions, characterized by leaders who inspire and motivate their followers to achieve beyond expectations while fostering a supportive and innovative academic environment. Transactional leadership was identified in 30% of the institutions, where leaders focus on structured tasks, performance metrics, and rewards for achievements. Laissez-faire leadership, found in 10% of the institutions, was characterized by a lack of direct supervision and minimal intervention in academic affairs.

Relationship between Leadership Styles and Academic Performance

The quantitative analysis revealed a significant positive correlation between transformational leadership and academic performance indicators, such as student satisfaction scores ($r = .45$, $p < .01$), graduation rates ($r = .40$, $p < .01$), and research publication output ($r = .38$, $p < .01$). Transactional leadership showed a moderate positive correlation with performance metrics related to specific targets and rewards, such as course completion rates ($r = .30$, $p < .05$). In contrast, laissez-faire leadership was negatively correlated with most academic performance measures, indicating a potential adverse effect on institutional outcomes.
The qualitative findings supported these results, with participants under transformational leadership expressing higher levels of motivation, engagement, and satisfaction. They attributed their positive academic outcomes to the supportive and empowering environment fostered by their leaders. Conversely, those under laissez-faire leadership reported feelings of neglect and a lack of direction, which they believed hindered their academic performance.

These results suggest that leadership style plays a critical role in influencing academic performance within Thai higher education institutions. Transformational leadership, in particular, appears to be most effective in promoting positive academic outcomes, highlighting the importance of inspirational and supportive leadership practices in the academic setting.

Discussion

Interpretation of Results

The study's findings highlight the significant impact of leadership styles on academic performance within Thai higher education institutions, aligning with existing literature that underscores the importance of effective leadership in educational settings. The positive correlation between transformational leadership and academic performance indicators is consistent with global research that identifies transformational leadership as conducive to higher levels of organizational performance, innovation, and employee satisfaction. This study extends this understanding to the context of Thai higher education, indicating that transformational leaders, who are motivational and supportive, can significantly enhance academic outcomes.

The moderate positive relationship between transactional leadership and specific academic performance measures suggests that this leadership style can also contribute positively to academic settings, particularly when clear goals and rewards are established. However, the negative correlation between laissez-faire leadership and academic performance underscores the challenges associated with a lack of leadership, reinforcing the notion that active and engaged leadership is crucial for academic success.

Implications for Practice

For administrators and policymakers in Thai higher education, these findings emphasize the need to cultivate and promote transformational leadership qualities within university leadership. Investing in leadership development programs that focus on inspirational motivation, intellectual stimulation, and individualized consideration could foster a more conducive environment for academic excellence. Additionally, while transactional leadership has its benefits, it should be balanced with transformational practices to ensure that the academic community is not only meeting established targets but also motivated to exceed expectations.
Institutions may also need to address the adverse effects of laissez-faire leadership by implementing more structured leadership evaluation and accountability mechanisms. Ensuring that leaders are actively engaged and responsive to the needs of their academic communities could mitigate the negative impacts associated with laissez-faire practices.

**Limitations and Future Research**

This study's primary limitation is its cross-sectional design, which provides a snapshot of leadership styles and academic performance at a single point in time. Longitudinal studies could offer deeper insights into how changes in leadership styles over time affect academic outcomes. Additionally, the study's focus on Thai higher education institutions limits the generalizability of the findings to other cultural and institutional contexts. Future research could explore the impact of leadership styles in a broader range of educational settings and incorporate more diverse demographic variables to understand the nuances of leadership effectiveness in different contexts.

Further investigation into the mechanisms through which transformational leadership enhances academic performance, such as through increased motivation, engagement, or innovation, could also provide valuable insights for theory and practice.
